

Please answer the following questions in a separate document.

- 1) Which feature of your favorite IDE do you use the most and why? Example: Format document with Option-Shift-F in Visual Studio Code, so that no unnecessary changes are visible due to formatting differences.
- 2) What SCM do you usually work with and what working model do you use? Example: I use SVN. Current development happens on the dev branch, larger features are committed to a feature branch.
- 3) Which working methodology appeals to you the most? Example: I prefer to work alone on a clearly defined task that I can complete within a week.
- 4) Comment on the following two methods. Example: hashCode and equals are implemented correctly.

```
private Set<Verspaetung> verspaetungen = new HashSet<>();
```

```
@Override
```

```
public int hashCode() {  
    int zugHashCode = zug.hashCode();  
    int verspaetungHashCode =  
        verspaetung != null ? verspaetung.intValue() : (int) Math.random();  
    return zugHashCode + verspaetungHashCode;  
}
```

```
@Override
```

```
public boolean equals(final Object obj) {  
    return Objects.equals(verspaetung, obj);  
}
```

- 5) Which book author, conference speaker, scientist, or colleague has inspired you the most and why? Example: Uncle Bob and his book Clean Code inspired me to write readable and maintainable code.
